ANALYTIC SYSTEMS AWARDED US ARMY SUBCONTRACT!

Surrey, British Columbia (March 10, 2003) — Analytic Systems is proud to announce that it was awarded the subcontract to manufacture the power supply for the US Army's Modern Burner Unit (MBU) program through the Energy Solutions Division of Teleflex Canada. After an exhaustive evaluation of power supply manufacturers on both sides of the border, Teleflex selected Analytic Systems to take over the manufacture of the program. Jim Hargrove of Analytic Systems was notified of the opportunity during a discussion with Harold Copping, president of Teleflex Canada at an ASI event in the fall of 2000. Two years of development and testing culminated in Analytic Systems being certified as the manufacturer and supplier of the MBU power supply in late 2002. Analytic Systems has already received orders for more than \$1,400,000 worth of the power supplies.
